DETAILED ACTION

The preliminary amendment filed February 13, 2002, has been received and entered.

Claims 5, 6 and 8 have been cancelled.

Claims 43-50 have been added.

Claims 1-4, 7, 9-22 and 43-50 are pending.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4 and 7, drawn to a bacterium, classified in class 435, subclass 252.1.
- II. Claims 9-22, drawn to an exopolysaccharide and compositions thereof, classified in class 536, subclass 123. As an aside note that claims 12-15, clearly directed to "[t]he exopolysaccharide of claim 11", improperly recite uses of the polysaccharide, and would be restrictable from the product claims if amended to properly recite processes of use of the exopolysaccharide of claim 11.
- III. Claims 43-50, drawn to a method of inhibiting the growth of a bacterium, classified in class 435, subclass 252.1.

Invention II is unrelated to inventions I and III.

Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case inventions I and II are different products. The first product is a microorganism, which is a living thing. The second product is a polysaccharide, which is not a living thing, and which is a polymer of individual monosaccharides. Thus, the two products clearly have different modes of operation, different functions, and different effects.

Invention II and III are unrelated because invention II is a polysaccharide and invention III is a method of inhibiting the growth of a microorganism. Again, the polysaccharide claims clearly have a different mode of operation, function and effect than the methods of inhibiting the microorganism's growth.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be

used in a materially different process, such as the production of the exopolysaccharide recited in claims 9-22.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and different classifications, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
